

Virtualmin

Started in 2003, **Virtualmin** is a powerful and flexible web hosting control panel for Linux and BSD systems. It enhances Webmin (started in 1997), which is a web-based interface for system administration for Unix. Using any modern web browser, you can setup user accounts, email accounts, Apache, DNS, file sharing and much more. Virtualmin is a [key component of WikiSuite](#).

The WikiSuite install script uses Virtualmin as explained here: <https://gitlab.com/wikisuite/wikisuite-packages>

The screenshot shows the Virtualmin interface with the title "Virtualmin Virtual Servers" and the subtitle "Version 4.18, master admin mode". On the left, there is a sidebar with various administrative options like "Create Virtual Server", "Edit Virtual Server", "Edit Users", etc. The main area displays a table of virtual servers with columns: Domain name, Username, Description, Users, and Aliases. The table lists several entries, including "virtualmin...tualmin.com" (proxy, proxy, Proxy to Virtualmin demo server, 1 User, Disabled), "demo.virtualmin.com" (proxy, proxy, Alias of virtualmin-demo.virtualmin.com, 0 Users, Disabled), and "virtualmin.com" (virtualmin, virtualmin, Virtualmin, Inc., 15 Users, 34 Aliases). At the bottom, there are buttons for "Delete Selected", "Update Selected", "Disable Selected", and "Enable Selected".
